

Deep Clean Specific to COVID-19

Our Three step process:

1.) Initial clean

- A cleaning crew will come in with protective gear and perform a top to bottom initial clean
- Using a multi-Task Probiotic cleaning solution, we will wipe down every surface touch by employees and customers
- All carpets will be vacuumed with hepa filtered vacuums and floors will be wet mop with a biosurfactant cleaner
- Mop heads & Rags are discarded

2.) Biohazard Disinfectant

- We then bring in foggers, Pump Sprayers, Spray bottles and Mop buckets using Anasphere which meets the EPA criteria for use against SARS-Co V-2, the cause of COVID-19 EPA at an approved dilution rate of 2 oz. to 1 Gallon of Anasphere a biohazard disinfectant.
- The disinfectant then settles for 15-30 minutes and is wiped down, mop up and vacuumed.
- Mop heads & Rags are discarded

3.) Preventive Clean

- The last step is to apply a probiotic layer of mist to all surface to allow for prevention against COVID-19.
