

Machinery & Services Offered

FENN is pleased to offer the complete MacBee line of specialty machinery. Examples of equipment offered include:

Payoff & Take-up Equipment:

- Spools or coils
- Driven turntables
- Lazy susan turntables
- Coil up-enders
- Precision tension
- Layer wound
- Random wind
- Precision control anneal take-up
- Specialty shaped wire take-ups
- Barrel packs

Drawing Equipment:

- Tube sinking
- Plug drawing
- Single draw
- Multiple draw
- Wet and dry draw
- Vertical and horizontal draw planes
- Precision tension control between draw blocks
- Water cooled drawing blocks
- Inverted Bull Blocks

Drawbenches:

- Hydraulic and chain driven
- Specialty inline up to 260 feet long
- Die pulls up to 200,000 pounds
- Oil troughs available
- Feed and discharge conveyors available
- Pointers for feeding material
- De-scalers

Deadblocks:

- Drawing or coiling deadblocks
- Die boxes and conversion kits for existing machinery
- Drive conversions, update to AC vector technology
- Rebuild used machinery and update technology on older draw machines

Assembly & Automation Equipment:

- Index stations
- Conversion of manual labor to semi and full automation systems

Fresh Outlook for MacBee Engineering Under New FENN Ownership

EAST BERLIN, CONNECTICUT - June 2nd, 2022 – FENN, LLC is pleased to announce that it has acquired the intellectual property of Engineered Machinery Group Inc., which includes the rights to MacBee Engineering Group, and will continue to build & support their product lines.

Founded in 1966, MacBee Engineering was known as an American manufacturer of Sink & Draw Machines, Drawbenches, Payoffs, Take-ups and a variety of ancillary equipment. In 2004, former MacBee Vice President John Stevens purchased MacBee Engineering, adding the MacBee product line to his own company, Engineered Machinery Group.

Although Stevens closed the company in 2013, the MacBee product line continued after being licensed to Steven's son, who operated his own firm- aptly named, Mac Bee until the pandemic forced its closure. Despite the closure, Stevens continued to maintain ownership of all MacBee designs & intellectual property, supporting the product line with his newly formed "John Stevens Consulting" firm. While customers have continued to rely on Stevens for assistance with their MacBee equipment, he was eager to find a new, permanent home for the MacBee rights. This would allow customers to not only purchase new machinery, but also enjoy a greater depth and breadth of service and spare parts availability.

With a similar focus in clientele, industries and equipment, FENN was a natural fit. *"MacBee's wire and tube focused product lines are an excellent complement to our existing drawbench, swager and wire shaping offerings. We look forward to utilizing FENN's existing infrastructure to continue providing MacBee equipment, service, and spare parts for MacBee customers,"* said FENN President Ryan Cutter. He added, *"We are proud to enable two great American-made machinery brands to continue to succeed under one roof. We look forward to continuing to provide customized solutions to meet all of our customers' metal forming requirements."*

With more than 50 years of experience with wire & tube machinery, Stevens will join FENN as a consultant to continue supporting MacBee product lines. *"I am excited to work with the FENN team to continue building and supporting MacBee machinery. I have a true passion for helping our customers and am thrilled to see the MacBee legacy continue with FENN's resources, support and guidance."*

Customers with immediate MacBee inquiries can contact FENN at sales@fenn-torin.com.

About FENN

Fenn is a global supplier of rugged, innovative, state-of-the-art metal forming machinery, custom engineered and precisely manufactured for each unique application. With over 120 years of experience, FENN experts can help make complex metal forming processes easy. With decades of proven results, and thousands of installations, FENN machinery is designed to reach production goals and meet critical tolerances. Product lines include Rolling Mills, Wire Flattening & Shaping Equipment, Turks Heads, Drawing Equipment, Swagers, and Torin® spring coilers.
